Abstract

Objective: To study the effects of XXX.

Case report: We herein report a case of a [age]-year-old [gender] patient with an unusual presentation of XXX. The case consisted of features typical of [common features], along with [additional features, if any], signifying [diagnosis/complications]. Features of this case are discussed together with their implications, including [implications of case]. [Additional measures taken—treatment/surgery/etc.] was undertaken due to [reason for measures].

Conclusion: XXX.

Keyword 1, Keyword 2, Keyword 3, Keyword 4, Keyword 5

Sample of Case Report

Main Text

1 INTRODUCTION

The Introduction should clearly show the objective of the study, provide a brief summary of previous relevant studies, and demonstrate the new advances in the current investigation.

2 CASE REPORT OR CLINICAL SERIES

The case introduction should clearly state the necessary details of the course of the disease and include the patient's disease onset, development, outcome, and follow-up results. Avoid copying the original medical records and avoid using subjective, doubtful, or speculative statements. Since the case report is of a rare or special case, the symptoms, signs, examination results, and treatment methods of special significance should be described in detail to highlight the key points.

3 DISCUSSION

The Discussion should incorporate the significance of the new information and relevance of the novel findings in light of existing knowledge. Limitations should also be stated.

4 CONCLUSIONS

The Conclusion should only summarize what you have said in the main text of the paper. You can make suggestions for further research or issue a call to action, but you should not introduce any new evidence or facts.

Declarations

Author contributions

The ICMJE recommends that authorship be based on the following 4 criteria:

1. Substantial contributions to the conception or design of the work; or the acquisition, analysis, or interpretation of data for the work; AND
2. Drafting the work or reviewing it critically for important intellectual content; AND
3. Final approval of the version to be published; AND
4. Agreement to be accountable for all aspects of the work in ensuring that questions related to the accuracy or integrity of any part of the work are appropriately investigated and resolved.

Non-author contributors who do not meet these criteria (e.g., provided only funding, general supervision, or language editing) should be moved to the Acknowledgments section.

Funding

This study was funded by XXX (Grant No. XXX). OR

This research received no external funding.

Data availability

The datasets used and analyzed during the current study are available from the corresponding author on reasonable request / are available in the [name of repository] [link]. OR

Not applicable.

Ethics approval and consent to participate

This study was approved by the Institutional Review Board (IRB) at XX university (Approval No. XXX).

Each patient voluntarily gave written informed consent before treatment. / Patients were consented by an informed consent process that was reviewed by the IRB. OR

Not applicable.

Consent for publication

Written informed consent was obtained from the patient(s) [or their legal guardian] for the publication of this study and any accompanying identifiable information or images. OR

Not applicable.

Competing interests

The author(s) declare(s) that they have no competing interests.

Acknowledgements

The authors used [name of AI-assisted tool, version] solely for language polishing and grammatical revision. All substantive content, study design, data analysis, interpretation, and conclusions were independently developed by the authors. No AI tool was used to generate scientific content, data, or figures. The authors take full responsibility for the accuracy and integrity of the work. OR

Not applicable.

References

References should follow Vancouver style, with in-text citations in plain text (e.g., [1], [2–5]) and a numbered reference list. Please include the DOI for the references and format it as a hyperlinked DOI. Please download EndNote output style from zentimepublishing.com to reformat the references in this paper.

Tables & Figures

Tables:

Tables should be designed to convey information clearly and independently of the main text.

- (1) Provide each table with a concise and informative title in bold.
- (2) Adopt a three-line table format to improve readability and standardization.
- (3) Define all row and column headings explicitly and maintain consistent terminology throughout.
- (4) Report numerical data with appropriate precision and apply uniform formatting across all entries.
- (5) Explain all abbreviations, symbols, and notations in a note placed below the table.

Figures:

Figures should be clear, well-structured, and effectively illustrate the key findings of the study.

Figure Quality

Figures should comply with standard publication requirements:

- (1) Use Arial font where possible, typically within the range of 8-10 pt (not smaller than 6 pt).
- (2) Label multi-panel figures with bold uppercase letters (e.g., A, B, C) positioned in the upper-left corner of each panel.
- (3) Submit figures in TIFF or PDF format with a resolution of at least 300 dpi.

Figure Legends

Sample of Case Report

- (1) Place editable legends directly beneath each corresponding figure.
- (2) For single-panel figures, use a bolded brief title and add a short explanation if needed. For multi-panel figures, give the whole figure a bolded overall title, label each panel with a concise subheading, and include extra details when necessary.
- (3) Define all abbreviations, symbols, and notations within the legend.
- (4) Indicate the source of every figure clearly; specify the tools or software used for author-generated figures, and include appropriate citations for reproduced or adapted figures, ensuring that required permissions have been obtained.
